

SALMAN KHAN

Tech Lead — Backend & Full-Stack Architecture (Node.js, TypeScript)

+91 9997816828 | salman93618@gmail.com | Noida / Meerut, India | LinkedIn

SUMMARY

- **9 years** of engineering experience spanning individual contribution, technical leadership, and team management — building and scaling multi-tenant SaaS platforms, distributed financial systems, and high-concurrency backend services on Node.js and TypeScript.
- Led a **12-engineer team** as Tech Lead to design, build, and ship a 5-insurer insurance marketplace in **3 months**, owning architecture, delivery, and stakeholder communication end-to-end.
- Track record of measurable engineering impact: cut API latency by up to **60%**, raised automated test coverage from **40% to 75%**, and delivered a zero-downtime migration of **100,000+** production records.
- Hands-on with architecture, billing/payment systems, database design, observability, security, AI-powered product features, serverless AWS infrastructure, and production operations — comfortable operating as both a people leader and a deep technical escalation point.

LEADERSHIP & MANAGEMENT EXPERIENCE

- **Team & People Leadership:** Led and mentored a 12-engineer cross-functional team at SundayLabs; acted as Scrum Lead at Daxko, owning sprint planning, ceremonies, and on-time delivery across 10+ consecutive sprints.
- **Delivery Ownership:** Took a 5-insurer aggregation platform from concept to production launch in 3 months, coordinating engineering, partner integrations, and security/compliance workstreams.
- **Technical Authority:** Served as primary technical spokesperson in system-design and security reviews, aligning API contracts, OAuth2 flows, and data-security standards across teams and partners.
- **Talent Development:** Directed the JavaScript-to-TypeScript migration across 15+ legacy modules and coached the team through the transition, cutting bug-related rework by ~40%.

EXPERIENCE

Senior Engineer I (Acting Scrum Lead) | *Daxko — SugarWOD Platform*

Sep 2023 – Present

- Designed and shipped an **AI-powered churn-detection module** using LLM APIs to flag at-risk members and trigger personalized retention nudges, improving member retention by **40%**.
- Cut API latency by up to **60%** through query optimization, compound indexing, aggregation-pipeline redesign, and Redis-based caching across a platform serving **50,000+** active users.
- Converted Parse Cloud functions into secure, validated backend APIs, eliminating direct database access from web and mobile clients and closing a class of security risk.
- Led the JavaScript-to-TypeScript migration across **15+** legacy modules, reducing runtime errors and bug-related rework by approximately **40%**.
- Raised automated test coverage from **40% to 75%** using Jest and introduced contract-mocking strategies that reduced flaky CI failures by **30%**.
- Optimized background jobs and schedulers with Redis and Bull queues, improving throughput and cutting job-processing latency.
- Owned Scrum ceremonies as acting Scrum Lead, maintaining on-time delivery across **10+** consecutive sprints.

Tech Lead / Senior Software Engineer | *SundayLabs*

Feb 2023 – Aug 2023

- **Led a team of 12 engineers** to design, build, and launch a multi-insurer insurance aggregation platform in **3 months**.
- Architected the microservices backend covering policy onboarding, partner integrations, policy management, and transaction flows.
- Delivered **5 insurer integrations**, resolving undocumented and legacy APIs through iterative debugging and reverse engineering.
- Acted as primary technical spokesperson in system-design and security workshops, aligning API contracts, OAuth2 flows, and data-security standards.
- Built the serverless backend for Growpital on AWS Lambda, DynamoDB, and API Gateway with auto-scaling infrastructure and near-zero idle cost.
- Redesigned the DynamoDB partition/sort-key model and introduced GSIs, improving read performance by approximately **40%**.

Senior Software Engineer | *Bytewrap Technologies — Esusu Fintech Platform*

Jan 2019 – Feb 2023

- Re-architected the Esusu fintech backend from RxJS to Node.js and TypeScript, building a scalable system serving **100,000+** registered users.
- Architected payment, subscription, and payout systems for reliable financial transaction processing and high availability.
- Led a Firebase-to-MongoDB migration, designing the document schema and writing idempotent Node.js scripts to process **100,000+** records with **zero downtime**.
- Cut query execution time by up to **60%** through compound indexing, denormalization, and query-plan analysis.
- Implemented event-driven workflows using Redis and Bull queues for async payment processing, retry logic, and payout scheduling.
- Owned backend architecture, development, deployment, and production support for **two mobile backends** and **three admin platforms**.

Software Engineer | *Innotical Solutions Pvt Ltd*

Jan 2017 – Jan 2019

- Built and scaled backend services and APIs using Node.js and MongoDB for web and mobile platforms.
- Transitioned from React.js frontend work to full-stack backend ownership, strengthening end-to-end delivery capability.

Software Intern | *Vencore Global Info Solutions*

Jun 2016 – Dec 2016

- Contributed to Java enterprise application development, building foundational skills in OOP, MVC architecture, and Agile SDLC.

KEY PROJECTS

- **SugarWOD — Fitness Tracking & Community Platform** (Node.js, MongoDB, TypeScript, LLM APIs): Engineered AI-powered churn detection using LLM-based reasoning and behavioral analytics; redesigned MongoDB aggregation pipelines and indexing for a **35%** reduction in average response time across **50,000+** active users.
- **Gromo — Multi-Insurer Insurance Platform** (Microservices, Node.js, OAuth2): Architected and delivered a microservices insurance aggregation platform integrating **5 insurers in 3 months**; standardized an insurer-adapter pattern that sped up onboarding of new providers.
- **Growpital — Agricultural Investment Platform** (AWS Lambda, DynamoDB, API Gateway): Built a fully serverless, auto-scaling backend with near-zero idle cost; resolved transactional data-integrity issues via a DynamoDB schema redesign with zero data loss.
- **Esusu Savings & Rent Reporting Platform** (Node.js, TypeScript, MongoDB, Express): Architected Group Savings, Social Login, Real-Time Chat, KYC, and Payment modules for **100,000+** registered users; built a Socket.IO chat backend and Plaid/Stripe webhook gateway that cut payment-failure alert lag from hours to seconds.
- **Visitor Management System** (Node.js, MongoDB, AWS S3, DynamoDB): Built the backend for enterprise visitor management (check-in/out, host notifications, badge printing, compliance reporting) with REST APIs for iOS, Android, and web clients.

SKILLS

- **Leadership:** Tech Lead, Team Lead, Scrum Lead, Sprint Planning, Code Review, Mentoring, Hiring & Onboarding, Stakeholder Communication
- **Languages:** JavaScript, TypeScript
- **Backend:** Node.js, NestJS, Express.js, REST APIs, WebSockets, GraphQL, Webhooks
- **AI & Agents:** LLM Integration, AI Agent Design, Churn Detection, Anthropic API, Prompt Engineering
- **Frontend:** React.js, Redux, HTML5, CSS3, jQuery
- **Databases:** MongoDB, MySQL, DynamoDB, Firebase, Schema Design, Query Optimization, DB Migrations
- **Caching & Queues:** Redis, Bull Queue, Background Jobs, Schedulers
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, DynamoDB), Serverless, Docker, CI/CD, GitHub Actions
- **Testing:** Jest, Mocha, Chai, Unit/Integration Testing, TDD, Contract Mocking
- **Architecture:** Microservices, Event-Driven Architecture, Serverless, Multi-Tenant SaaS

EDUCATION

- **M.Sc. Computer Science** — Shobhit University, Meerut, India (2013 – 2015)
- **B.Sc. Computer Science** — CCS University, Meerut, India (2010 – 2013)
